

## Advantages of Art Thatch™

### Bringing a Modern Touch to a Tropical Tradition

Art Thatch™ addresses the demand for safe and sustainable synthetic thatching with a long life and optimal realism. Our artificial thatch roofing is filled with exotic golds, rustic tans, rich yellows and warm browns; all the tropical colors of natural reed and palm thatch. Our Zulu Reed and Baja Palm™ simulate nature as closely as possible so you can protect it while maintaining the enduring tradition of thatch roofing.

### Beautiful, Affordable and Eco-responsible Exotic Artificial Thatch Roofing

The marginal price difference between Art Thatch™ panels and natural thatching is more than made up for in the long term by the cost savings in maintenance and replacement. The highest quality natural thatch only lasts up to 7 years, based on climate conditions.

Compare to Art Thatch™ artificial thatching, which has a sustainable life beyond 20 years in all climates; more than double the life of its natural palm and reed counterparts.

### Attractive and Realistic

Zulu Reed™ and Baja Palm™ synthetic thatch is filled with the natural colors and warm shades found in the natural settings native to Africa, Europe, Asia and the Americas. Art Thatch™ simulates nature as closely as possible to fill the demand for a realistic artificial thatch that's identical to the natural palm leaf and reed used to create traditional thatched roofs.

### Safe and Sustainable

Art Thatch™ synthetic thatching is made of Polypropylene (PP), which is one of the most chemically neutral and safe plastics. This means the runoff from roofs thatched with Zulu Reed™ and Baja Palm™ is safe for sensitive water tables and marine environments. It also doesn't pose a risk to human health.

Our artificial thatch is sustainable and 100% renewable, as well as being recyclable and biodegradable.

Compare to PVC plastic thatch, which has a toxic lifecycle and complicated disposal.

## Warrantied and Fire Rated

Art Thatch™, Zulu Reed™, and Baja Thatch™ are offered with a 20-year limited warranty. This provides an important value on your thatch roofing investment. Art Thatch™ is impervious to moisture and the damage that insects, birds, and snakes do to traditional natural materials. That's one of the significant advantages of faux palm and reed thatching over their counterparts.

Our Zulu Reed™ and Baja Palm™ artificial thatch products are available as both Class A fire rated and non-fire rated. This provides a large savings over natural thatch which is flammable by nature and can cost up to \$3 a square foot to be fire retarded.

Art Thatch™ also has UV protection, making it resistant to sun fading. Making sure that your artificial thatch stays realistic and beautiful for longer than natural thatch.

## Art Thatch™ For Any Project and Budget

The affordability and durability of Art Thatch™ makes it the ideal sustainable development solution. Whatever your project's style or budget, whether it's an outdoors or interior application, if your client is commercial or residential, you can depend on us to provide a safe and beautiful product that's both economical and eco-responsible.
